PROFESSIONAL SUMMARY

Computer Engineering student (Diploma, graduating Jan 2027) specializing in application security, reverse engineering, and cross-platform mobile development. Hands-on experience building Flutter/Firebase mobile applications, Python automation tools, and interactive web-based engineering tools. Certified Ethical Hacker (CEH) with practical experience in binary analysis, Android APK reversing, and network security. Seeking internship or junior developer/security analyst roles.

EDUCATION

Diploma in Computer Engineering *Jun 2024 – Jan 2027 (Expected)*

SSM Polytechnic College, Tirur, Kerala

Certified Ethical Hacker (CEH) & Certified Penetration Tester (CPT) *2022*

Redteam Hacker Academy, Kozhikode, Kerala

TECHNICAL SKILLS

Languages: Python, Dart, JavaScript, TypeScript, Java, C, PHP, Bash, Lua, Assembly, Smali (Dalvik Bytecode), HTML5, CSS

Frameworks & Tools: Flutter, Firebase (Firestore, Auth), Django, Streamlit, TensorFlow, ESP-IDF, r2pipe, Radare2, Wireshark, Three.js, Git & GitHub, Linux

Security: Reverse Engineering, Android APK Analysis, Binary Patching, Penetration Testing, Network Traffic Analysis, Bug Bounty Hunting

Languages (Human): Malayalam (Native), English (Fluent), Japanese (Basic)

PROJECTS

WireFlow | Flutter, Dart, JavaScript | Live: reverseengineeringdude.github.io/WireFlowWeb

<https://github.com/ReverseEngineeringDude/WireFlowWeb>

Interactive logic-circuit builder for students and electronics hobbyists with real-time simulation.

- Built a drag-and-drop canvas where users place AND/OR/NOT gates and connect wires with precision
- Implemented real-time logic simulation that propagates signals and visualizes circuit errors instantly
- Deployed as a progressive web app (PWA) using Flutter Web — accessible on any browser without installation
- Designed for educational use: helps students learn digital logic hands-on

LatePass | Flutter, Dart, Firebase (Firestore)

<https://github.com/ReverseEngineeringDude/LatePass>

Mobile app automating late-attendance tracking for educational institutions, replacing paper-based workflows.

- Integrated barcode scanning for instant student ID verification and session management
- Built Firestore backend with real-time data logging, CRUD operations, and CSV export
- Reduced late-entry recording time significantly by eliminating manual attendance entry

DataStructure Visualizer | Flutter, Dart | Live: reverseengineeringdude.github.io/DataStructure

<https://github.com/ReverseEngineeringDude/DataStructure>

Web app that visually demonstrates data structures (arrays, linked lists, trees, stacks) step-by-step.

- Renders animated step-by-step traversals and operations to aid algorithm learning
- Deployed as a Flutter Web PWA with zero-install access via browser

Blind-Assist | Flutter, Dart, TensorFlow Lite

<https://github.com/ReverseEngineeringDude/Blind-assist>

AI-powered accessibility app for visually impaired users, providing real-time audio-described object detection.

- Integrated on-device TensorFlow Lite model for real-time object recognition without internet dependency
- Implemented text-to-speech feedback pipeline to narrate detected objects to the user

RedFly | *Android, HID Protocol, Bluetooth*

<https://github.com/ReverseEngineeringDude/RedFly>

HID-based Android app that emulates a keyboard/mouse over Bluetooth for remote device control.

- Implemented live keystroke injection and custom shortcut sequences via Bluetooth HID profile
- Applicable to penetration testing, device automation, and accessibility tooling

ADDITIONAL INFORMATION

Soft Skills: Analytical Thinking, Problem Solving, Curiosity, Self-Directed Learning, Team Collaboration

Interests: CTF Competitions, Open Source Development, IoT Hardware Experimentation, AI/ML Applications, UI/UX Design
